

Bloom's Taxonomy is a set of three hierarchical models used to classify educational learning objectives into levels of complexity and specificity. The three lists cover the learning objectives in Cognitive, Affective and Psychomotor domains. The Cognitive domain list has been the primary focus of most education and is frequently used to structure curriculum learning objectives, assessments and activities.

The three domains and respective levels are illustrated in the following Table.

Cognitive (Knowledge-based)	Affective (Emotion-based)	Psychomotor (<i>Dave Model</i>) (Action-based)	
Remembering	Receiving	Imitating	Lower Level to Higher Level
Understanding	Responding	Manipulating	
Applying	Valuing	Précising	
Analyzing	Organizing	Articulating	
Evaluating	Characterizing	Naturalizing	
Creating	— — —	— — —
